Programming Languages: Python, Java, JavaScript, C, C++, HTML, CSS, SQL, TypeScript

Frameworks: Flask, React, pandas, JQuery, node.js, JUnit

Technologies: Git, PostgreSQL, Gradle, Docker, Android Studio

EDUCATION

Rochester Institute of Technology

Expected May 2026

- MS Software Engineering

4.0 GPA

University at Buffalo

May 2024

- BS Biomedical Science

WORK EXPERIENCE

Perfection Auto Glass | [Website Designed](#)

March 2025 - May 2025

Contract UI/UX Developer

Zimmerman, MN (Remote)

- Designed and developed a full marketing website for a family-owned auto glass repair company
- Built a responsive UI using HTML, CSS, JavaScript, and Bootstrap for seamless mobile and desktop compatibility
- Integrated a contact form using FormSubmit to enable email-based service requests
- Configured domain forwarding and deployed the site using GitHub Pages and GoDaddy
- Collaborated with business stakeholders to align the design with their brand identity and service goals
- Provide ongoing support and updates to continuously refine the site based on evolving business needs

Southern Tier Robotics | First Robotics Team 2053

October 2014 - Present

Software Coach

Vestal, NY (Remote)

- Lead the design and optimization of robotic control systems in C++, focusing on performance, reliability, and innovation
- Mentor student developers in software architecture, debugging, and algorithm design throughout the build season and competitions
- Coordinate technical meetings, prepare the team for regional events, and support strategy to maximize competitive performance

PROJECTS

Multi-User Party Planner | [GitHub](#) | Python Server with Flask API, React, TypeScript, PostgreSQL

February 2025 - Present

- Event planning application
- Developing RESTful backend APIs using Flask and PostgreSQL to support user login, event form creation, and preference-based group generation in a multi-user party planning web app
- Implementing a secure user authentication and account management system, enabling organizers to create and manage roles for customizable events
- Designing a relational database schema to support dynamic form inputs, matching scores, and event scheduling logic
- Collaborating in a Scrum team of 5 graduate students, contributing to spring planning, code reviews, and daily standups to ensure timely delivery of MVP features
- Supported full-stack development and cross-functional integration with the React + TypeScript frontend team to enable seamless user experience across roles

BetterMaps | [GitHub](#) | Android Studio, Java, Google Cloud Console, PostgreSQL

September 2024 - December 2024

- Campus navigation Android application
- Collaborated with a Scrum team of four other graduate Software Engineering students to create an intuitive platform that helps users easily navigate campus using real-time map data and personalized features
- Utilized the Google Maps API and Java to integrate detailed tunnel routes, building layouts, and location-based services
- Key features include the ability for users to save preferred locations and routes, and access faculty office hours and building operating hours for improved campus accessibility
- Focused on delivering a seamless user experience through a combination of efficient location tracking, intuitive UI design, and real-time data updates

RESEARCH

Breast Cancer Screening With Thermography | [View Paper Review](#)

January 2025 - Present

- Researching breast cancer screening using dynamic infrared thermography to explore non-invasive diagnostic methods
- Collaborating with a faculty advisor on a capstone project to develop a software tool that detects patient acclimatization to baseline environmental conditions
- Authored multiple literature and paper reviews analyzing recent studies on the use of thermography in breast cancer detection, with an emphasis on trends, limitations, and potential improvements
- Investigating both technical and human-centric limitations of traditional mammography to explore potential advantages of thermographic approaches

CAMPUS INVOLVEMENT

Rochester Institute of Technology Student Esports Athlete | [Counter-Strike at RIT](#)

January 2025 - Present

- Compete on the Division I RIT Counter-Strike 2 team
- Traveled locally to Syracuse, NY, for an in-person collegiate competition and qualified to travel to Texas for the NACE Starleague Playfly Tournament of Champions
- Participate in team practices, scrimmages, and official matches as part of RIT's varsity Esports program
- Collaborate with teammates and coaching staff to develop strategy, maintain peak mechanical performance, and analyze gameplay for continuous improvement
- Balance competitive play with academic responsibilities in a fast-paced, team-oriented environment
